

# STid Mobile ID<sup>®</sup> plugin

SMARTER SECURITY ANSWERS

STid Mobile ID<sup>®</sup> transfers your access credentials to smartphones, in addition to or instead of the RFID card, and simplifies the day-to-day management of your badges.

The STid Mobile ID<sup>®</sup> plugin, integrated with the Genetec unified Security Center platform, provides a single interface to control all STid Mobile ID<sup>®</sup> Portal functionality, including virtual cards issuance and revocation.

The STid Mobile ID<sup>®</sup> Portal can be directly interfaced with the Security Center unified platform through the STid Mobile ID<sup>®</sup> plugin from Addonxpert.

From Security Desk, you can manage all STid Mobile ID features, including :

- Virtual cards creation and revocation.
- Management of all credentials from the Security Center
- Synchronization from Genetec and STID Mobile ID<sup>®</sup>.
- Mass import from Genetec or STid Mobile ID<sup>®</sup>.
- View all virtual badges in a Security Center report

## Vertical application

- Industry & tertiary sector
- Government
- Defense
- Education
- Bank
- Energy and utilities
- Healthcare
- IT/Telecom

## Compatible versions

- Security Center 5.9

# Application

## Plugin configuration

In Config Tool, the STid Mobile ID® plugin offers the following functionalities:

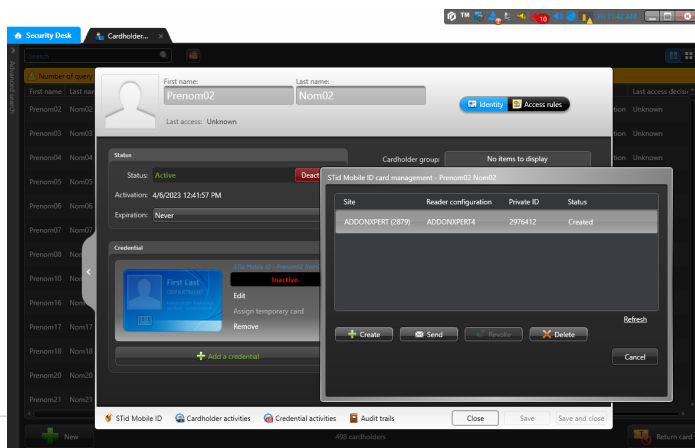

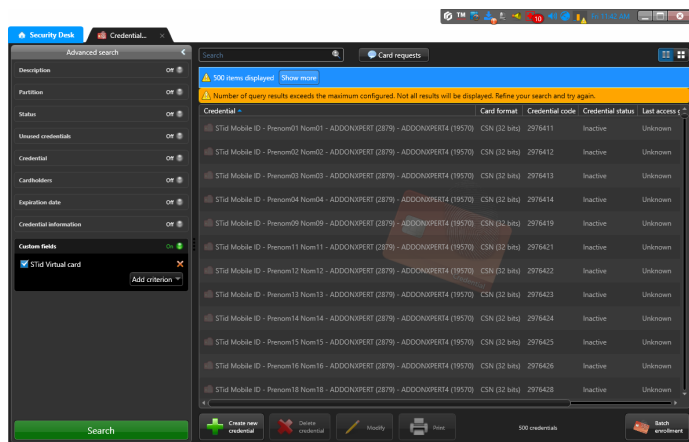

- Connection parameters with the STid Mobile ID® portal
- Custom fields to save virtual badge settings
- The relationship between site, reader configuration and card format
- Synchronization management (manual or automatic)

## Operational use

The STid Mobile ID® integration makes it possible to take advantage of the unification offered by the Genetec Security Center:

- The STid Mobile ID® virtual card manager by an access button
- The creation, sending, revocation and deletion of the virtual card(s)
- Real-time monitoring of events
- Event-action mechanisms
- Unification with CCTV
- Report on virtual cards
